

# Databuild 2.71.1

## New and improved

Section	Features
Estimating	<p><b>Purchase Order Hyperlink Labels</b></p> <p>You can now use the [label] + URL syntax in the BOQ workup text field to create clickable labels instead of showing the full URL. This makes Purchase Order hyperlinks clean and easy to read in both PDF and Crystal Reports.</p> <p><b>Example:</b></p> <p>[Databuild]<a href="https://www.databuild.com.au">https://www.databuild.com.au</a></p>

## Fixed

Section	Fixes
Estimating	Fixed an issue where setting a colour, then changing a cost centre, then scrolling or clicking can cause a runtime error.
	Fixed an issue where editing an item code in the BOQ screen incorrectly jumped back to the filter box, preventing item code entry.
	When generating an order for a second time and selecting not to overwrite it, the new PO file is no longer generated in the wrong folder.
	Resolved password reset bug at the login screen.
	Fixed an issue where an error occurred when running the job costing reports, if the payment reference is longer than 15 characters. The field will be truncated to 15 characters on the job costing report.
	Fixed an issue where the percentage complete was not calculated for a cost centre, when posting a timesheet.
