Databuild 2.71 Release Notes

Fixed

Security	Resolved potential connectivity issues with the licence server by requiring TLS 1.2 or higher for all connections to ensure compatibility.

Behind the scenes

What's changed?
This release forms part of our ongoing **Databuild Modernisation Program**, aimed at improving the security, resilience, and long-term maintainability of the platform. With the growing importance of secure, cloud-ready software, we've transitioned Databuild's licensing layer to use **TLS 1.2**, the current industry-standard protocol for encrypted communications.
